Introduction

DT Form is a powerful online form builder with smart digital tracking that makes it easy to create robust forms and collect important data. Trusted by organizations worldwide, including government agencies, educational institutions, small businesses, and large enterprises, DT Form enhances operational efficiency with features like QR code tracking, AI-powered analysis, and comprehensive reporting tools.

Overview

In a digital-first world, organizations require efficient and secure methods for collecting and managing information. Online form builders have become essential tools, replacing traditional paper-based processes with dynamic, customizable, and cloud-based solutions. DT Form meets these evolving needs by enabling organizations to create intuitive forms, streamline workflows, enhance data accuracy, and uphold the highest standards of security and accessibility.

The image shows a screenshot of the DT Form interface. On the right, a form titled "Create Custom Digital Forms" is displayed. It contains three input fields: "Name", "Phone", and "Email" (with the placeholder text "example@example.com"). Below these fields is a dashed blue box containing a plus sign, indicating where to add new elements. At the bottom of the form is a green "SUBMIT" button. On the left, a "Form Elements" sidebar is open, showing a list of icons for different form elements. The "Phone" element, represented by a telephone icon, is highlighted in orange and is being dragged towards the dashed box in the form.

Introduction

QR Code & Tracking Number

Track submissions instantly with a unique QR code and tracking number, enabling customers to monitor request status in real time with ease and precision.

AI-Powered Data Analysis

Analyze submission data with advanced filtering and reporting capabilities to identify trends, segment responses, and inform strategic decision-making.

Email Notifications

Enhance communication by automatically sending email updates upon form submission and response, ensuring a consistent and professional user experience.

Flexible Deployment

Deploy anywhere — host forms on your domain, on-premises, or in the cloud, offering complete flexibility to meet your operational needs.

Customizable Form Fields

Build robust forms with intuitive drag-and-drop fields, including text inputs, dropdowns, checkboxes, dates, and phone numbers.

Export Data to Excel

Streamline reporting by exporting collected data to Excel for detailed analysis, efficient recordkeeping, and seamless team collaboration.

Main Interface & Functions

Accurate Form Validation: All mandatory fields and email formats are automatically verified before submission, ensuring complete, accurate, and reliable data for system administrators. This minimizes errors, improves workflow efficiency, and upholds data quality across the platform.

Secure User Verification: A robust CAPTCHA (Completely Automated Public Turing test to tell Computers and Humans Apart) system confirms that every interaction is made by a real person, protecting the platform from automated bots. This not only safeguards system security but also preserves the authenticity of user-submitted information.

Instant Email Confirmation: Users immediately receive a detailed email confirmation after submitting a form, providing quick access to their submission information. This ensures transparent communication, builds trust, and allows users to keep a permanent record of their request.

Automatic PDF Receipt: Each completed submission is securely saved as a PDF file, containing key details such as the applicant's name, submission date, tracking number, and a unique QR code. This ensures organized record-keeping, simplifies future reference, and supports easy tracking whenever needed.

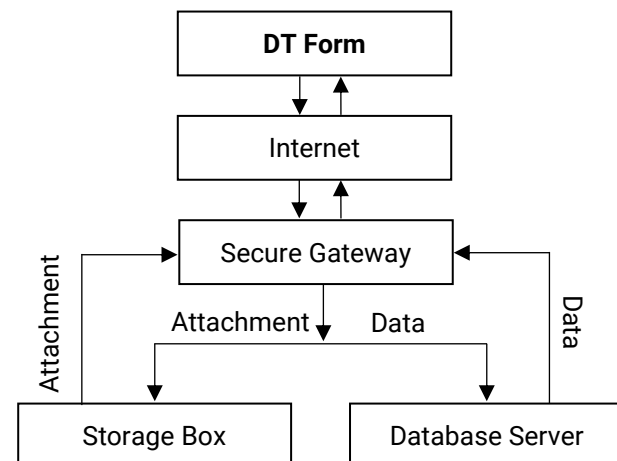

Real-Time Tracking Access: Users can monitor the status of their submission at any time by scanning their personalized QR code or entering their tracking number. This real-time visibility enhances customer satisfaction by providing quick, easy updates without the need for direct inquiries.

Advanced Storage Box Technology

DT Form ensures enhanced security by storing all attachments uploaded during the request submission process in a separate, isolated environment, rather than on the main server that hosts application files and databases. This isolation prevents hackers from injecting malware into attachments—commonly referred to as 'malware in attachments'—and significantly reduces the risk of system breaches. This advanced security feature is known as 'STORAGE BOX' technology.

Features of "STORAGE BOX" Technology

- ✓ **Secure Isolated Environment:** Attachments are stored in an isolated environment, separate from the main server, preventing malware injection and protecting the system. This security feature is known as 'STORAGE BOX' technology.
- ✓ **Absence of a Web Server:** STORAGE BOX technology operates without a web server, preventing the execution of malicious commands, especially executable files such as PHP and ASP.
- ✓ **Reduced Bandwidth Usage:** STORAGE BOX technology optimizes server performance by significantly reducing bandwidth consumption.
- ✓ **Enhanced Speed:** Systems utilizing STORAGE BOX technology achieve a performance improvement of over 60% compared to those without it.

The Power Behind the DT Form

The platform's control panel is a powerful administrative interface that centralizes the management of customer requests through a streamlined, secure dashboard. It allows administrators to track submission statuses in real time, access detailed request histories, assign role-based permissions, and configure form behaviors without technical complexity. Built-in analytics offer insights into performance metrics, while features like automated notifications and data export in multiple formats enhance operational efficiency. Designed for scalability and ease of use, the control panel ensures complete oversight and control as organizational needs evolve.

Key Features

➤ Create unlimited digital forms

➤ Easily export form data to Excel

➤ Search requests by tracking number

➤ Customize and print selected fields

➤ Add custom headers to match your

➤ Activate or deactivate any form at any

➤ Notifications tied to your forms

➤ Access full log history

➤ Share forms across all social platforms

➤ Respond to form submissions with ease

➤ Create unlimited control panels

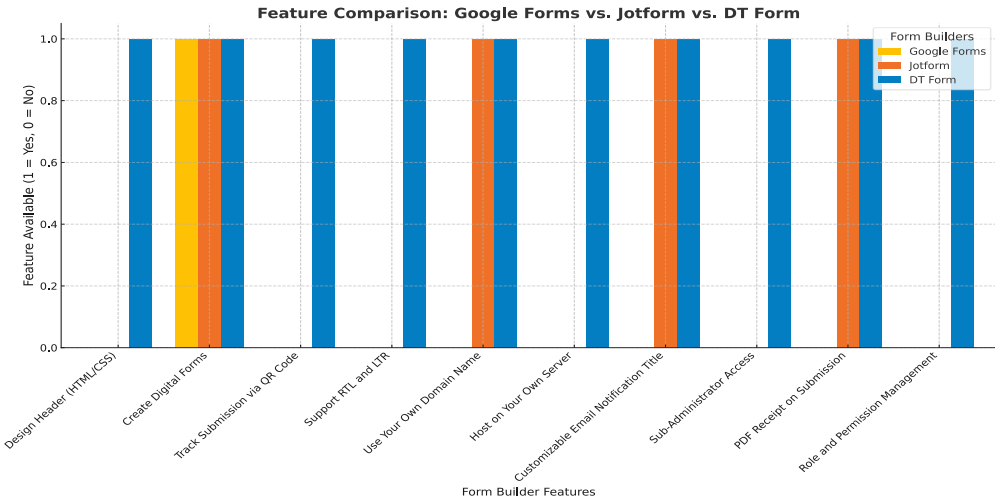

➤ Advanced Reporting for Each Form

9-	PDF Receipt on Submission	✓	✗	✓
10-	Role and Permission Management	✓	✗	✗

Security

DT Form is built with security as a top priority. All customer data is transmitted over encrypted HTTPS connections to protect against interception. Access to submitted forms and administrative panels is restricted through role-based authentication and secure login credentials. To prevent unauthorized access, DT Form supports IP filtering, session timeouts, and optional two-factor authentication. Data is stored on secure servers with regular backups and real-time monitoring for potential threats. We follow best practices in web application security, including input validation and protection against common vulnerabilities like SQL injection and cross-site scripting (XSS), ensuring customer information always remains private and secure.

- **HTTPS Encryption**

All data transmitted between the customer's browser and the DT Form platform is encrypted using HTTPS, preventing interception by third parties.

- **Two-Factor Authentication (2FA)**

DT Form offers 2FA for administrator and control panel logins, adding an extra layer of protection beyond just usernames and passwords.

- **Role-Based Access Control**

Only authorized personnel can access sensitive areas of the system, with different roles and permissions defined to limit access to what's necessary.

- **Captcha Protection**

Login and form submission pages can be protected with CAPTCHA to block automated bots and brute-force attacks.

- **Automatic Threat Detection and Blocking**

DT Form monitors suspicious behavior—like repeated failed logins or injection attempts—and instantly blocks harmful IPs to keep your data safe.

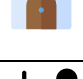

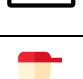

Technical Support

DT Form offers exceptionally advanced technical support, designed to ensure a seamless experience for customers at every stage of their journey. Our dedicated support team is composed of skilled professionals with deep expertise in online form building, data management, and security protocols. Whether you're a beginner setting up your first form or an enterprise administrator managing complex workflows, we provide timely and effective assistance tailored to your specific needs. Support is available through multiple channels including email, live chat, and scheduled video calls. We also offer remote troubleshooting and walkthroughs for critical issues, minimizing downtime and enhancing productivity. DT Form's commitment goes beyond just solving problems—we work closely with our customers to optimize performance, ensure data safety, and guide them toward the best practices for long-term success.

- **Initial Setup & Configuration:** Our team helps you get started by guiding you through installation, domain setup, and essential configurations to ensure your form builder is ready for use.
- **Customization & Form Design Assistance:** We provide support for customizing form layouts, fields, and styling to match your brand and workflow requirements.
- **Live Troubleshooting & Error Fixing:** If issues arise while building or managing forms, our support team offers real-time help to diagnose and fix problems quickly.
- **Ongoing Performance & Security Monitoring:** We continuously monitor performance and provide guidance on improving speed, security, and stability of your online form builder.

DT Form in Action: Industry Use Cases

Sector		Common Uses
	Government	Service requests, licenses, citizen feedback, public surveys
	Education / University	Admissions, course registration, student evaluations, scholarships
	Healthcare	Patient intake, appointment booking, health surveys, insurance forms
	Corporate / Business	HR requests, employee onboarding, job applications, feedback forms
	E-commerce	Orders, returns, support tickets, product customization
	Non-Profits / organization	Donations, volunteer forms, event RSVP, membership, outreach
	Hospitality / Travel	Booking forms, check-in/out, feedback, service inquiries
	Construction / Real Estate	Project quotes, work orders, rental apps, inspection forms
	Events / Entertainment	Event registration, contests, feedback, vendor signups
	Logistics / Delivery	Delivery requests, issue reports, pickup scheduling, driver forms

Conclusion and Summery

DT Form is a powerful and secure online form builder built to transform digital communication and data management across public, private, and semi-official sectors. With a unique combination of flexibility, scalability, and robust security, it enables institutions to manage digital forms efficiently while protecting sensitive data from evolving cyber threats.

Its user-focused design supports a wide range of applications—from citizen engagement to internal workflows—making it a versatile solution for organizations of all sizes. Backed by continuous technical support and the ability to adapt to both national and institutional needs, DT Form is more than a form builder—it's a strategic enabler of digital transformation.

As institutions strive to modernize operations, strengthen data integrity, and elevate service delivery in a digital-first world, DT Form stands out as the platform of choice.
